

LoanMagic

Reach Out to Borrowers In a Whole New Way!

It's critical for borrowers and lenders to communicate efficiently, which is why we created LoanMagic, an application designed specifically for your borrower's tablet or smart phone. LoanMagic accelerates the loan process by making communication faster and easier. Borrowers and lenders can interact, share information, and work together... with the touch of a finger!

Communicate Loan Conditions

Today's borrower is on the go, and wants a mobile mortgage loan process that allows for communication at any time... and from anywhere. LoanMagic allows lenders to communicate loan conditions and action items immediately, providing borrowers with a real-time "to do" list. As borrowers satisfy conditions and action items, the application automatically notifies the lender and closing agent.

Check Loan Status

LoanMagic's loan status page allows the borrower to track the current stage of their loan... from application, verification, and loan preview, all the way to closing. Borrowers can see the progress of their loan in real-time along with estimated target dates, expanded milestone descriptions, and specific loan information.

eSign documents quickly and efficiently

DocMagic's eSign process is the fastest, easiest, and most secure way to get documents signed. Borrowers can review and eSign loan documents and disclosures and provide additional information instantly. Lenders can increase data integrity and stay on top of loan document status, allowing everyone involved to work more efficiently than ever.

Branding and LOS compatibility

LoanMagic can be easily customized to share our clients' unique branding style and can integrate with any loan origination software system (LOS).
